Overview of OGC Standards

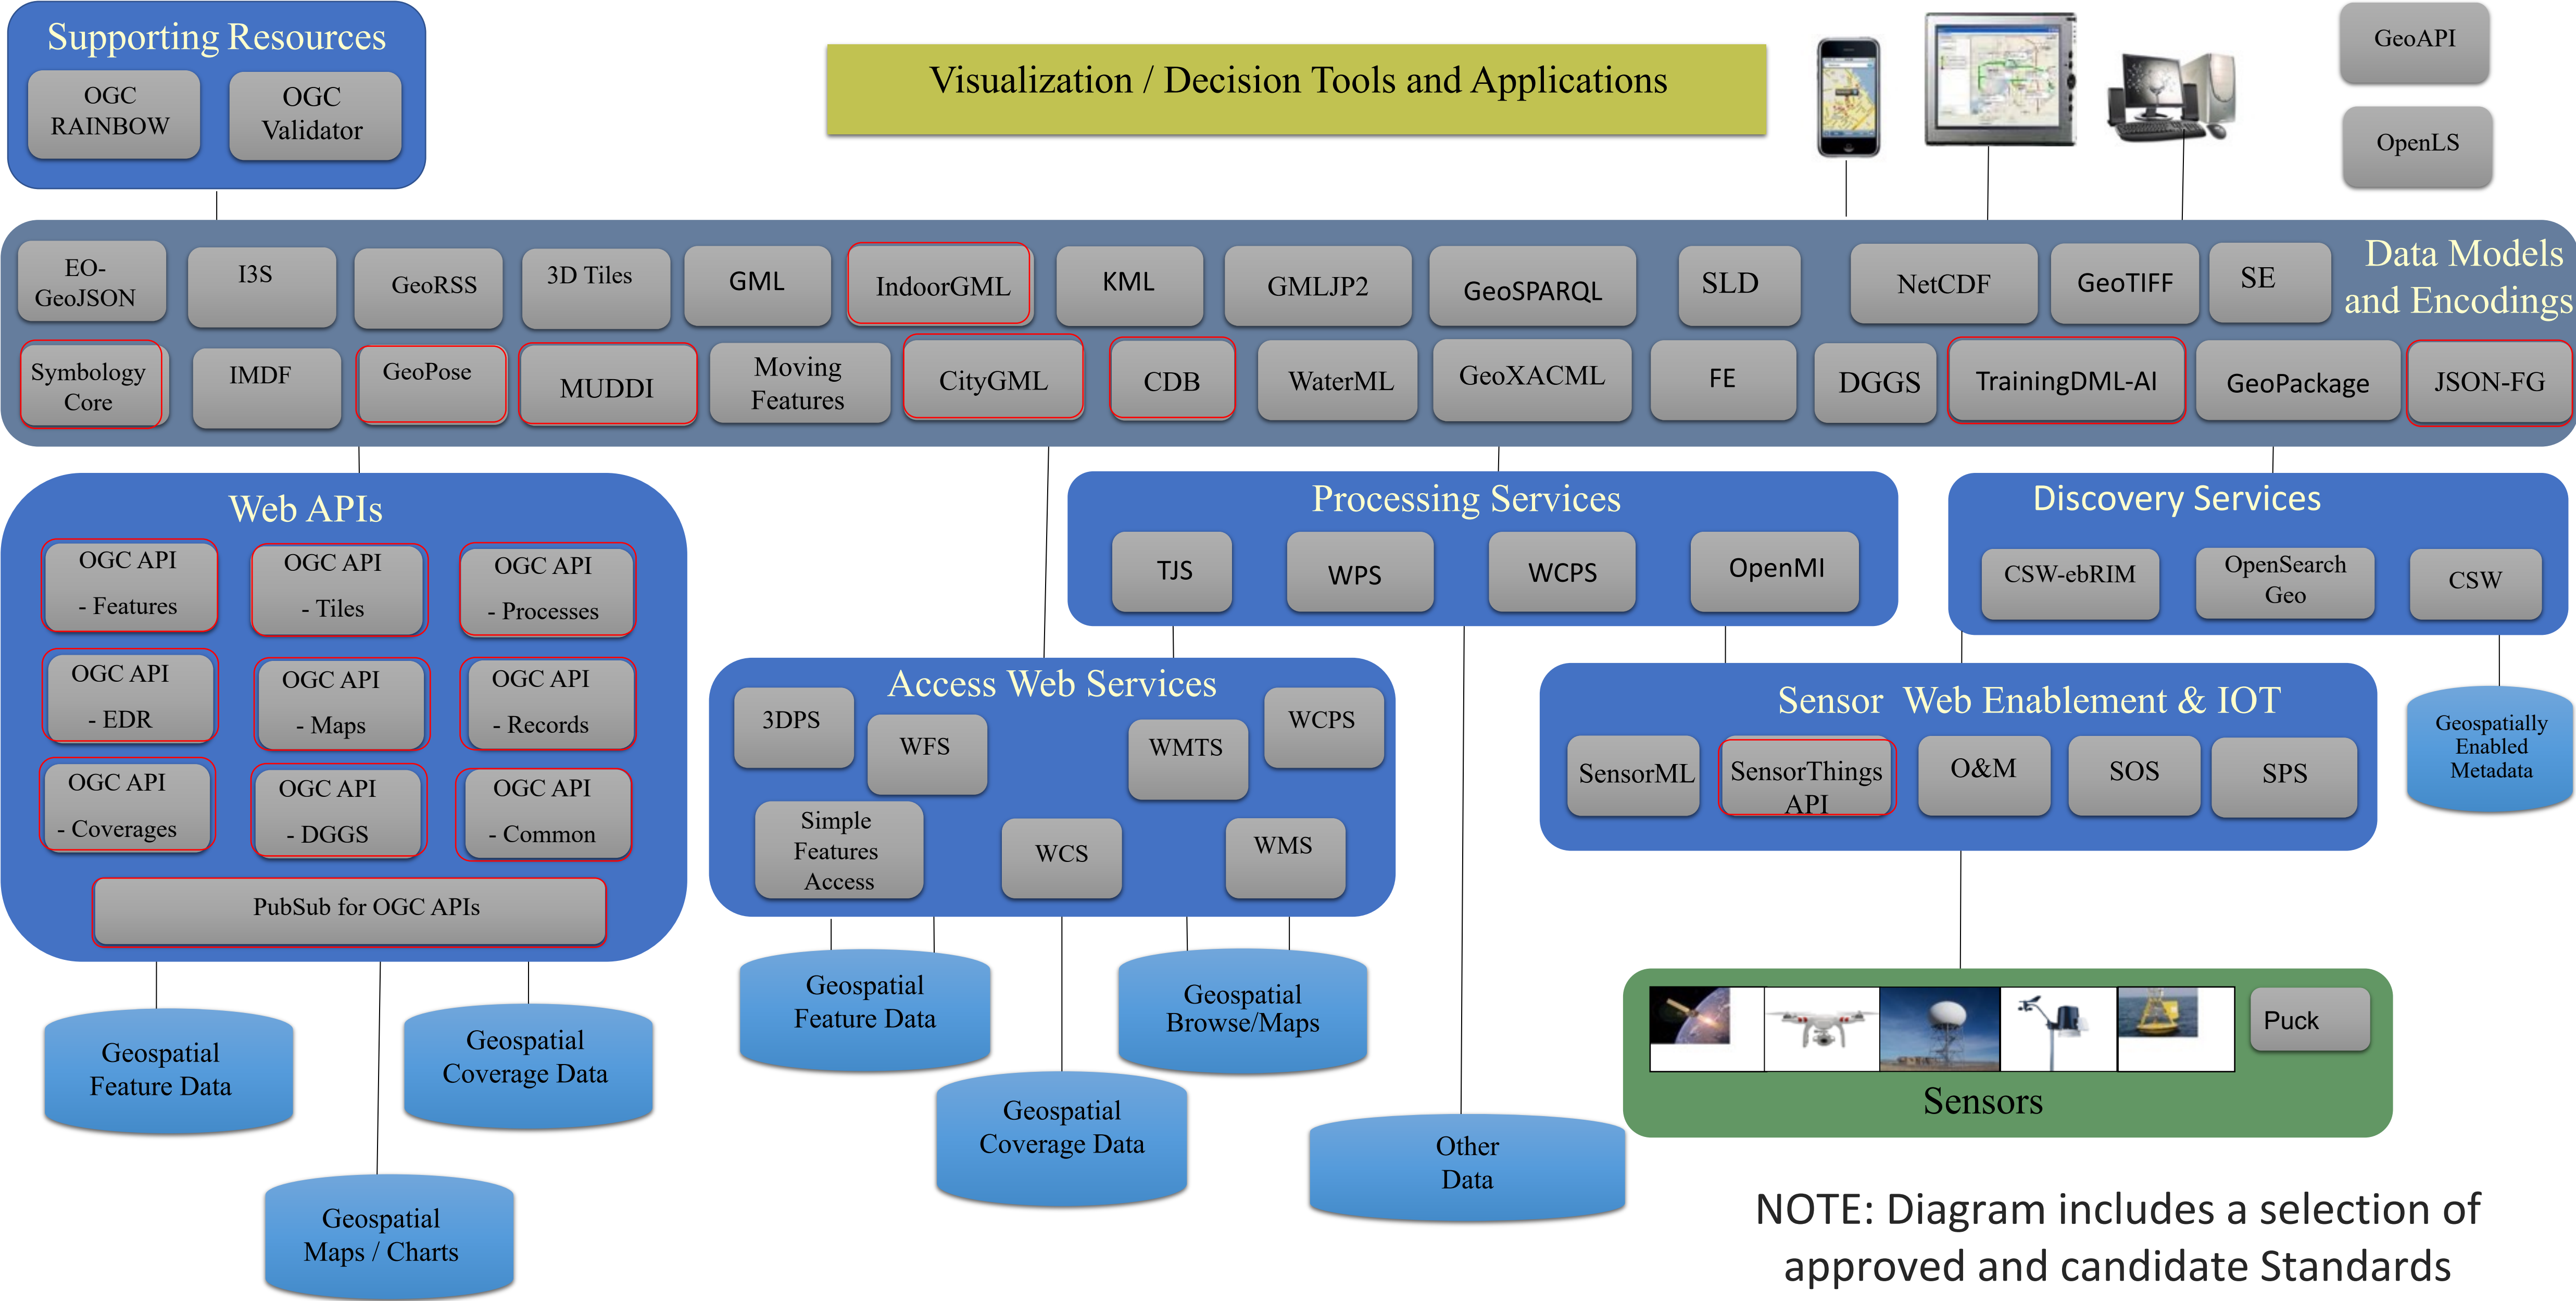

Dr. Gobe Hobona
13 June 2024

Introduction

- Definition of an OGC Standard
 - A document, established by consensus and approved by the OGC Membership, that provides rules and guidelines, aimed at the optimum degree of interoperability in a given context.
- Types
 - Implementation Standards
 - Extension and Profile Standards
 - Abstract Specification
 - Community Standards and Profiles

OGC Standards across the Geospatial Ecosystem

Sprint Goals

- Develop prototype implementations of OGC Standards
- Document the prototype implementations
- Test the prototype implementations
- Conduct Technology Integration Experiments
- Provide feedback about what worked and what did not
- Provide feedback about the specification documents

Examples of the types of feedback sought

- Were the informative sections clear enough to be understood?
- Were the requirements and requirements classes clear enough to be implemented?
- Were the abstract tests and conformance classes clear enough to be implemented?
- How can the candidate or approved Standard be improved in the future?
